Vision 2020

S.D. Gupta

Corporate Director, IHMR

MD, PhD,

(Johns Hopkins) FAMS

IHMR Jaipur continues to strive for excellence and achieve its mission of improving standards of health of the people through high quality management research, education and capacity development of the health

professionals at the national and international level. It has emerged globally as a unique model of an autonomous non-profit and self-financed organization that is focused on a social sector, such as health, through research and education. We are proud of its work culture and organizational ethos- transparency, openness, mutual trust, autonomy, accountability, shared responsibilities, and opportunities for growth and development. This is the kind of ethos that characterizes a typical learning organization.

We have significantly expanded during the last decade and have successfully established two new campuses, at Delhi and Bangalore. These campuses are fully functional. We boast of world class infrastructure, which has grown phenomenally at all the campuses.

The Institute has conducted several research studies that have high impact on and relevance to health policies and program strategies.

The Institute has made forays into the international arena. In collaboration

with the Department of International Health, Johns Hopkins School of Public Health, the Institute continues to provide technical support to the Ministry of Health, Afghanistan for developing a monitoring and evaluation system. Afghan Mortality Study that covered over 30,000 households in difficult and risky areas of Afghanistan has made an international mark. A health systems project, supported by DFID, has been initiated with the Department of International Health and Institute of Development Studies, UK with partner institutions in Afghanistan, Bangladesh, China, Nigeria, and Uganda. The Institute signed MoUs with Mahidol University, Bangkok, among other universities in South-East Asia, for collaborative research and student and faculty exchange in order to build capacity, especially in Public Health and Management. We signed a MoU with BP Koirala Institute of Health Sciences, Nepal to build capacity in health management and provide support in developing an MPH Program. The Institute is now an active partner in the South-East Network of Public Health Education Institutions of WHO SEARO. We are in the process of setting up a MoU with Gulf Medical

University, and making move to have IIMR in Africa.

Developing human resources for health with management competencies and leadership skills was at the core of the Institute's Mission. The Institute became the only organization in the health sector to offer such programs in India and South-East Asia. MDPs were conducted on leadership and management development in health care, health sector reforms, quality assurance, health management information systems, communication planning and management for behavior change, result-based management, management of health programs, and NGO management. The Institute also organized offshore international MDPs in Afghanistan, Thailand, Bhutan, Nepal and Bangladesh in collaboration with SAARC, WHO, World Bank, IUATLD and other agencies.

We introduced the nation's first AICTE approved and accredited postgraduate diploma in hospital and health management, that became the top-ranking program in the country. This was the first ever program that recognized that non-medical graduates can be developed into professional hospital and health managers. The program

has set high standards of management education in the health sector. We take pride in creating a critical mass of young professional managers in the health sector in the country. It is not only the private and corporate worlds, but also the public sector which has recruited these health and hospital management graduates. We believe they would be the future leaders in the professional management of hospitals, health organizations and pharmaceutical

industry. The scintillating example of Gujarat health system's transformation is largely attributed to the IIMR students.

We added another two-year full-time program in Pharmaceutical Management to develop professionals with comprehensive management and leadership skills along with technical competencies relevant to the pharmaceutical industry. Recently, we have introduced Rural Management to address the needs of the development sectors. Our students are in great demand and we are proud of our alumni.

The decade 2011-20 begins this year. We have come a long way. Where do we go now from here? 'Consistency is a virtue of mediocrity' said Emerson. We have kept innovating and reinventing in teaching, research and training. We have our dreams to become a world class Institute of learning and scholarship in management education, research and capacity development in the health sector.

All these activities, plans and vision indicate how committed we are to a bright future of India, and how concerned we are to improved health standards of the people of the country. We believe it is all doable: we will make it happen. AMEN!
